

AMENDMENTS**In the Specification**

Please replace the paragraph beginning at page 6, lines 18-22, with the following rewritten paragraph:

It is understood that the top ends of bridged via stacks 130 are not in contact with power line 110 to avoid electrical shorts but that the top ends are instead substantially surrounded by dielectric films 150140 for insulation from power line 110. Dielectric films 150140 may include conventional insulating materials such as, for example silicon dioxide.
